2. EXECUTIVE SUMMARY

The **Aureon AI Career Intelligence Assistant** is an AI-powered automation platform designed to streamline and enhance the job search process. It eliminates repetitive manual work by discovering job opportunities, evaluating eligibility, generating tailored application materials, and delivering actionable recommendations.

The system uses AI agents and workflow automation to collect jobs from multiple sources, remove duplicates, analyze each opportunity for relevance and eligibility, store structured data in a centralized database, and send summarized recommendations via email.

Built with n8n, Google Gemini, Google Sheets, and Gmail, the solution demonstrates how AI and automation can be combined to solve a real-world productivity challenge efficiently and at scale.

PRIMARY OBJECTIVE

Design and implement an AI-powered workflow that **automates the entire job search and evaluation process**, saves time, reduces manual effort, and helps **candidates focus on high-quality opportunities**.

KEY HIGHLIGHTS

Automated job discovery

Collects opportunities from multiple platforms and sources.

Duplicate removal

Ensures only unique opportunities are processed.

AI opportunity assessment

Evaluates job relevance and provides Apply or Skip recommendation.

Eligibility intelligence

Checks work authorization, remote policy, sponsorship, and other requirements.

Centralized intelligence database

Stores structured data for tracking, analytics, and future automation.

Automated reporting

Sends email summaries of the best opportunities to focus on.

VALUE DELIVERED

Time Efficiency

Automates repetitive tasks and saves significant time.

Better Decisions

AI analysis helps focus only on relevant and high-potential roles.

Higher Accuracy

Reduces human error and ensures consistent evaluation.

Organized Data

Centralized tracking of opportunities and application status.

Actionable Insights

Clear recommendations delivered directly to your inbox.

3. SOLUTION OVERVIEW & SYSTEM ARCHITECTURE

3.1 COMPLETE N8N AUTOMATION WORKFLOW

The screenshot below shows the full end-to-end n8n workflow for the Aureon AI Career Intelligence Assistant.

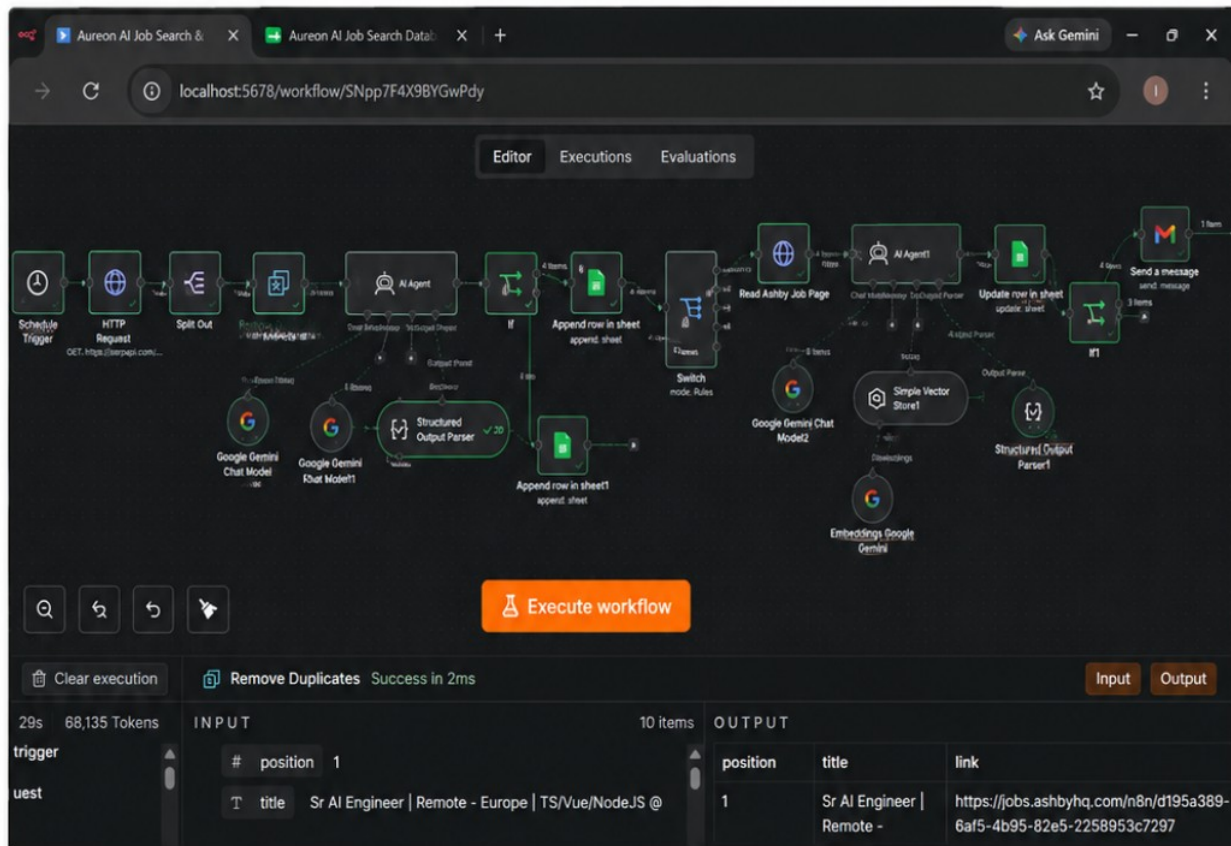

Figure 1: Full n8n Workflow – Aureon AI Career Intelligence Assistant

WORKFLOW SUMMARY

- Schedule Trigger** – Initiates the workflow at set intervals.
- HTTP Request** – Fetches job opportunities using SerpAPI.
- Split Out** – Breaks the response into individual job items.
- Remove Duplicates** – Ensures only unique jobs proceed.
- Edit Fields** – Cleans and standardizes job data fields.
- AI Agent** – Extracts structured job information.
- If (True/False)** – Routes valid jobs to the next stage.
- Append Row in Sheet** – Stores raw job data in Google Sheets.
- Switch (Rules)** – Routes jobs for detailed processing.
- Read Ashby Job Page** – Extracts full job description.
- AI Agent1** – Analyzes jobs using Gemini + Vector Store.
- Update Row in Sheet** – Updates records with analysis results.
- If1** – Checks final recommendation (Apply/Skip).
- Send a Message** – Sends summary report via Gmail.

4. ENGINEERING ARCHITECTURE – AI OPPORTUNITY ASSESSMENT ENGINE

4.1 OVERVIEW

The AI Opportunity Assessment Engine evaluates each job opportunity to determine whether it is a good match for the user. It uses Google Gemini to analyze job descriptions and company context, produces a recommendation (Apply or Skip) with a match score and reasons, and stores the recommended jobs for the next stage.

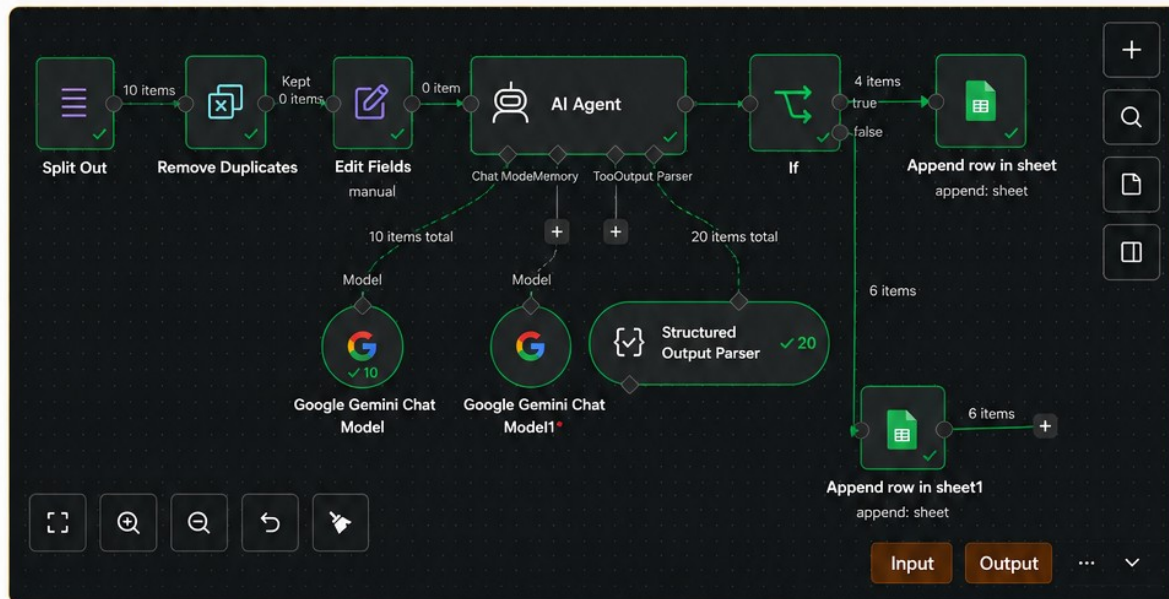

Figure 2: AI Opportunity Assessment Engine – n8n Workflow

HOW IT WORKS

- 1 Split Out** – Converts the HTTP response into individual job items for processing.
- 2 Remove Duplicates** – Filters out previously seen jobs to ensure uniqueness.
- 3 Edit Fields** – Cleans and standardizes job data for accurate analysis.
- 4 AI Agent** – Uses Google Gemini to analyze the job description and company context.
- 5 Structured Output Parser** – Converts the AI response into structured fields: recommendation, score, and reasons.
- 6 If (Condition)** – Routes jobs based on AI recommendation: Apply = true, Skip = false.
- 7 Append Row in Sheet** – Saves recommended jobs (Apply) to Google Sheets.
- 8 Append Row in Sheet1** – Logs skipped jobs for tracking and reporting.

KEY CAPABILITIES

- AI-Powered Matching**
Leverages Google Gemini to evaluate relevance and alignment with user preferences.
- Smart Recommendation Engine**
Provides clear Apply or Skip recommendations with match score and detailed reasons.
- Structured Data Output**
Ensures consistent, machine-readable results for seamless automation.
- Data Quality Assurance**
Removes duplicates and standardizes data for reliable decision-making.
- Automated Logging**
Stores outcomes in Google Sheets for transparency, tracking, and reporting.
- Intelligent Routing**
Automatically routes opportunities to the appropriate stage of the automation pipeline.

5. ENGINEERING ARCHITECTURE – AI ELIGIBILITY INTELLIGENCE ENGINE

5.1 OVERVIEW

The AI Eligibility Intelligence Engine evaluates each job opportunity for eligibility factors such as work authorization, remote policy, visa sponsorship, and location requirements. It leverages company knowledge stored in the vector database to ensure only eligible jobs proceed for application generation.

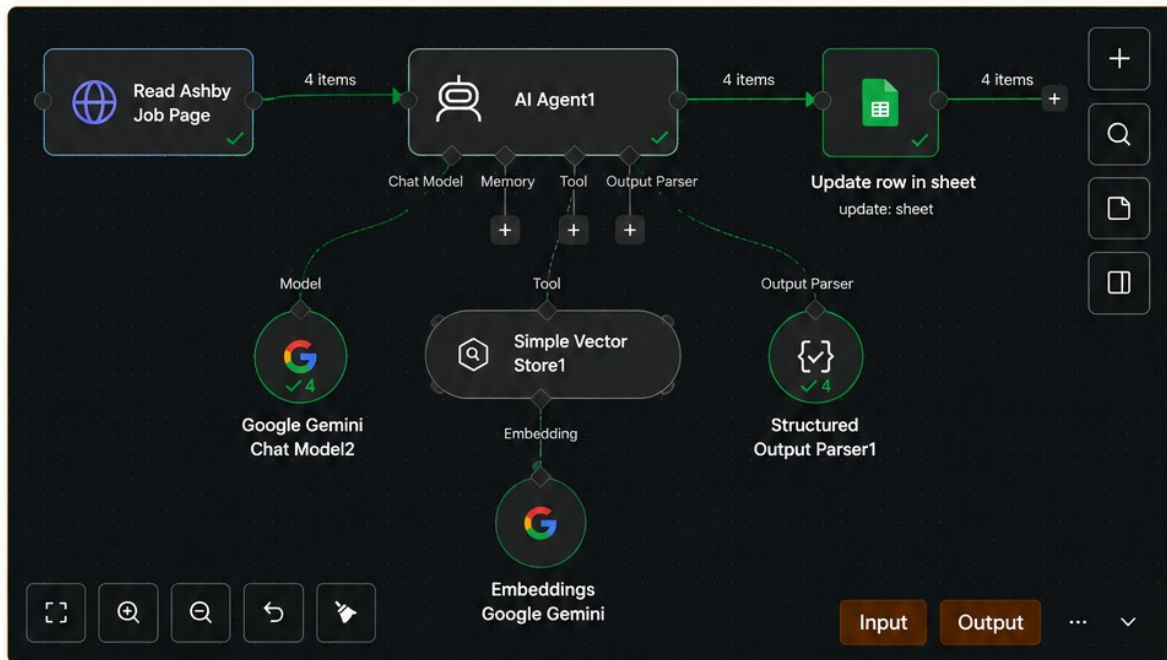

Figure 3: AI Eligibility Intelligence Engine – n8n Workflow

HOW IT WORKS

- 1 **Read Ashby Job Page** – Extracts the full job description for detailed eligibility analysis.
- 2 **AI Agent1** – Uses Google Gemini to evaluate eligibility based on work authorization, remote policy, visa sponsorship, and location requirements.
- 3 **Simple Vector Store1** – Retrieves company policies, past decisions, and job requirements for accurate context.
- 4 **Google Gemini Chat Model2** – Powers the AI reasoning with advanced understanding and evaluation.
- 5 **Structured Output Parser1** – Converts the AI response into structured fields: eligibility status and detailed reasons.
- 6 **Update Row in Sheet** – Saves eligibility results (Eligible / Not Eligible with reasons) in Google Sheets.

KEY CAPABILITIES

- Eligibility Verification**
Automatically checks work authorization, visa sponsorship, remote policy, and location requirements.
- AI-Powered Reasoning**
Uses Google Gemini to interpret job descriptions and company policies for accurate eligibility decisions.
- Knowledge Retrieval**
Leverages vector store to retrieve company knowledge and historical decisions for better accuracy.
- Structured Decision Output**
Provides consistent and machine-readable eligibility results with clear reasons.
- Automated Record Update**
Automatically updates the Career Intelligence Database in Google Sheets.
- Automated Reporting**
Ensures eligible jobs are ready for proposal generation and application.

6. ENGINEERING ARCHITECTURE – DATA, REPORTING & EXECUTION LAYER

This layer handles persistent data storage in Google Sheets, automated Gmail reporting, AI proposal generation, and execution tracking. It ensures full traceability, transparency, and auditability across the automation pipeline.

6.1 CAREER INTELLIGENCE DATABASE (GOOGLE SHEETS)

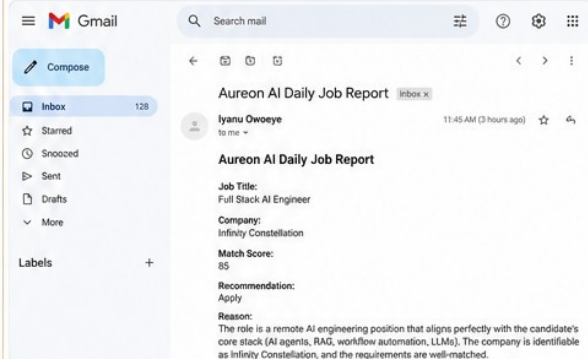

Centralized database storing job opportunities, AI decisions, eligibility results, scores, and reasons.

Job Title	Company	Job link	Recommendation
AI Automation Engineer	Quadrivia	https://jobs.ashbyhq.com/quadrivia/ef77b530-b481-4a32-a6d5-b0468a5419f2	Apply

✓ Structured storage of recommended jobs for the next automation stage.

6.2 GMAIL AUTOMATED REPORT (SUMMARY EMAIL)

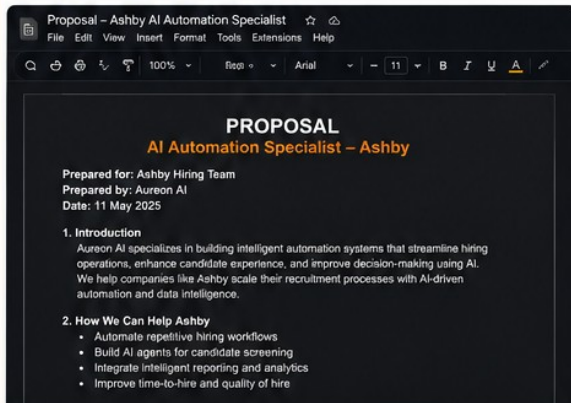

Automated summary email sent daily with all eligible jobs for quick review and action.

✓ Clear daily report with match score, recommendation, and reasons.

6.3 AI PROPOSAL GENERATION (CUSTOM PROPOSAL)

AI-generated personalized proposal for each eligible job using job details and company context.

✓ Generates tailored proposals that highlight value, solutions, and expected impact.

6.4 EXECUTION & RESULT TRACKING (WORKFLOW RUN)

Execution logs showing successful workflow runs, data updates, and email delivery.

✓ Full execution visibility from data ingestion to reporting and email delivery.

6.5 ELIGIBILITY RESULTS DATABASE (GOOGLE SHEETS)

Stores detailed eligibility intelligence for every recommended job.

Eligibility Status	Eligibility Confidence	Remote Type	Visa Sponsorship	Work Authorization Requirement	Job Location	Salary	Eligible Reason
Not Eligible	High	United States	unknown	unknown	United States	\$125k-200k	The job posting specifies the role is for "Remote (North America)" and does not provide visa sponsorship.

✓ Comprehensive eligibility data captured and stored for accuracy and future reference.

7. RESULTS & IMPACT

MEASURABLE OUTCOMES

The Aureon AI Career Intelligence Assistant transforms a time-consuming and manual job search process into a fully automated, intelligent, and data-driven system. The results below show the measurable impact from our first working version.

**10**Job Opportunities
Processed
in test run**6**Recommended
(Apply)
High-match jobs**6**Personalized
Proposals Generated
Ready to send**90%**

Time Saved

From manual job search
and screening

JOB RECOMMENDATION RESULTS

● **Apply (60%)**
High-match opportunities

● **Skip (40%)**
Low-match opportunities

AUTOMATION TIME SAVINGS

**90%
Faster**

Job search, screening and proposal writing time per 10 jobs

BUSINESS & CAREER IMPACT

**Better Opportunities**Focus on high-match
jobs with clear reasoning.**Smarter Decisions**AI-powered analysis of job
requirements and company
context.**Higher Productivity**Automates repetitive tasks
and delivers ready-to-send
proposals.**Transparent & Reliable**All data, decisions and
communications are logged
in Google Sheets.

KEY TAKEAWAYS

- ✓ The system works end-to-end — from finding opportunities to sending personalized applications.
- ✓ Combines AI intelligence, automation, and data storage for maximum efficiency.
- ✓ Ready to scale for daily use and future feature upgrades.

8. CONCLUSION & NEXT STEPS

The Career Intelligence Assistant demonstrates how AI agents and workflow automation can transform a time-consuming, manual process into an intelligent, end-to-end system that delivers accurate insights, saves time, and drives better outcomes.

ABOUT AUREON AI

Auréon AI builds intelligent business systems that automate repetitive processes using AI agents, workflow automation, and large language models. We help businesses work smarter, move faster, and achieve more with automation.

MISSION

Building Intelligent Business Systems.

CORE EXPERTISE

AI Agents

Intelligent agents that think, decide, and take action.

OpenAI

State-of-the-art LLMs for intelligence and content.

Workflow Automation

End-to-end automation of complex processes.

RAG Systems

Retrieval Augmented Generation for accuracy.

n8n

Powerful workflow automation platform.

Vector Databases

Store and retrieve knowledge for intelligent decisions.

Google Gemini

Advanced AI models for reasoning and generation.

API Integrations

Connect and automate with any tool or service.

FUTURE ROADMAP

AI Sales Agents

Automate outreach, qualification, and follow-ups to close more deals.

AI Recruitment Systems

Intelligent candidate sourcing, screening, and interview automation.

Customer Support Agents

24/7 AI support agents that understand, respond, and resolve.

Business Intelligence Dashboards

Real-time analytics and insights for smarter decisions.

Enterprise Automation Solutions

Custom AI-powered systems designed for scale, security, and impact.

LET'S BUILD INTELLIGENT SYSTEMS TOGETHER
